**Grow  
Wizz  
Kid**

**To be used by schools,  
sports teams and  
company restaurants!**

**GrowWizzKid helps children discover solutions through experimentation and case studies. GrowWizzKid is a total-concept program for primary schools on food literacy and botany (the science of plant life). GrowWizzKid is a combination study of nature and engineering, creating an organic-learning experience to different types of growing methods, vegetation and herb life. GrowWizzKid is fun! To see your seeds come to life in “real time” is “memorable” for kids.**

**GrowWizzKid targets agricultural learning which will contribute to a better standard of living in our current society. Additionally, children will be prepared for jobs in the future labour market.**

**The GrowWizzKid indoor grow system is used by schools, company restaurants and sports teams.**

**GrowWizzKid supplies vegetables  
and herbs continually indoors**

- Growing in a multi-layered growing system with LED lights
- “Designed for kids, built by kids”
- Online instructions and cases
- Application of 21st century skills

**GrowWizzKid gives  
answers on issues as:**

- What is (healthy) food?
- How does it grow?
- How do you eat it?
- What is the effect on your body and mind?
- How to produce healthy food for the increasing world population?
